

UPGRADING OR REPLACING AN APPLIANCE: UNDERSTANDING YOUR OPTIONS

If you're replacing or upgrading an appliance, staying with gas is often the simplest and most practical option.

Why many customers stay with gas

1. Your home already has a gas connection

Your existing gas connection means you can usually replace like-for-like without major changes to your home.

2. A more straightforward appliance replacement

In many cases, switching energy systems can involve additional electrical upgrades or changes to your home set-up.

3. It's reliable for everyday use

Gas delivers reliable results for cooking, heating and hot water, with safe, consistent performance when appliances are properly maintained.

4. Supported now and evolving for the future

Gas continues to play a role in Australia's energy mix, and development of a renewable gas industry could support continued gas use as part of the overall energy transition.
